## SIX INTERPRETATIONS OF THE UNIVERSE

Or:
A Better History of Time—
One which Explains Apparent Singularities

Presented by Geshe Michael Roach Princeton, NJ March 5, 2012

## Six Interpretations of the Universe Or: A Better History of Time

## What Keeps a Wall Up?

What forces or elements are present within a wall which enable it to hold up the roof of the building we are sitting in right now? Can we posit a theory of physical matter which also explains unique interactions with that matter—such as the collapse of the World Trade Center?

Is it true that the physical matter in a wall is unchanging, unitary, and independent?

Is it true that the physical matter in a wall is self-standing and substantial?

Is it true that the physical matter in a wall, and the perception of that matter, come from different sources?

## Six Interpretations of the Universe Or: A Better History of Time

Is it true that the physical matter in a wall is called what it is by definition?

Is it true that the physical matter in a wall exists from its own side, through some unique identity of its own, rather than existing simply by virtue of having appeared to an unaffected state of mind?

Is it true that the physical matter in a wall exists from its own side through its own identity, rather than existing simply through names and images?
